Puzzle questions answers in marathi

I get a surprising number of questions that either (1) I can't answer without knowing much more detail than the reader offers, (2) the reader can answer as easily as I can, or (3) involves asking SmarterTravel.com to do something we don't do. Below you will find answers to general questions. Reading the answers before you ask one of these questions saves time and helps you find the answer yourself. Where are we supposed to go? I would need a 600-page book or an all-day debate to answer this question in any useful way. In order to be any help, I first need to know quite a bit about you: what kind of family or group you have, what your benefits are, how much time you have, what your budget goals or limitations are, whether you want luxury or simplicity, whether you like bright lights or loneliness, what kind of activity interests you, what kind of climate you want, whether your grandchildren or dogs go with you, and so on. Surprisingly, some readers who ask where to go don't even tell where they live and begin their journey. I can only help if you send me much more specific questions. If you're completely unsure of what you want to do, my best recommendations are that (1) you read a lot of travel posts, (2) sign up for many destination sites, and (3) you'll find a good travel agency that's adept at dealing with these types of issues. When should we visit? As with any question, the best time to visit question depends on how you define the best time: cheapest prices, minimum crowds, most extensive activities, warmest/coldest/driest/wet climate, and so on. In terms of cost, the answer is almost always in high season, but it may not be what you really want. What's the price? I'm probably getting more of this than anything else, and that's a little surprising. If you make it all the way to AskEd & AnswerEd, you're clearly SmarterTravel.com. And right there, our bright new homepage, in the top right corner, has our own price search gateway: you can search for airline tickets, hotel, car rental, holiday and cruise fares. If you don't like our search system, there are dozens more. Don't think we have secret ways to get on plane tickets that aren't available to you; We don't have any. We're going to have to do the same kind of search you did. If you're asking about a trip that isn't handled by regular US search engines, a good place to try is ETN, where you can send a trip anywhere in the world and get ticket vendors to match their best deals. And if you start your trip in another country, you'd better find a local discount travel agency online or offline in this country. Can you arrange my trip/sell me a ticket? Not. SmarterTravel.com doesn't arrange trips or sell tickets. Tickets. If you're just looking for schedule information, scroll to the upper-right corner to Travel Tools, where one of the options in the drop-down menu is Flight Schedules. Includes a hotel seeker and links to service providers selling all kinds of trips. What are the requirements? Quite a few readers ask about different requirements and restrictions, especially air travel, but also travel documents. You can answer almost all of these questions simply by googled the question. Here you can search for some of your most common questions: Airline baggage restrictions: Every airline tells you their baggage policy online. Just log in to the airline website and find a link to your luggage. If you don't see it in the drop-down menu, go to site search or sitemap. (By the way, when you are looking, the official term is baggage, not luggage. Luggage is what you buy at the store; When you put your stuff in it and take it on a trip, it becomes a burden.) Permitted goods in hand luggage: The National Transportation Safety Board (TSA) maintains a do's and don'ts list of hand luggage. Passport and visa requirements: The State Department's travel information home page has a button with information about foreign travel for U.S. citizens, and another for detailed passport information. The information button leads to detailed lists of visa requirements for entering any country in the world. Is it safe to visit? No one can answer whether you are safe when visiting any foreign country – or anywhere in the United States. However, the State Department is compiling an extensive database of countries around the world, including warnings about places to avoid and more general information about what visitors can expect. Click Travel Warnings on the Ministry for Foreign Affairs travel page to get information about hot spots and consular bulletins for other places. What am I complaining about? Most travel vendors list the address of complaints, or at least the contact us address on one of their websites. You can find them easily. And you can forget your big fuss by sending a registered return receipt letter or express mail to the CEO – it ended up in the same complaints office. The U.S. Department of Transportation (DOT) makes it even easier for the airline to file complaints. Its website lists the current name, snail email address, phone and email address of all major U.S. airline complaint agencies. You can file a complaint with the DOT if you want. Dot also provides comprehensive information about the rights you have and don't have as an air passenger. BuzzFeed Daily newsletter lets you keep up with the latest daily buzz! Although the word geography is derived from Greek and literally means writing about the earth, the subject of geography is much more than describing foreign places or remembering the names of capitals and countries. Geography is an all-in-one discipline that seeks to understand the world — its human and physical characteristics — by understanding place and location. Geographers examine where things are and how they are There. My favorite definitions for geography are the bridge human and physiotherapy and the mother of all sciences. Geography looks at the farm connection between humans, places and the earth. Many people have an idea of what a geologist does, but they have no idea what a geographer is doing. Although geography is generally divided into human geography and physical geography, the difference between physical geography and geology is often confusing. Geographers aim to study the earth's surface, its landscapes, its properties and why they are where they are. Geologists look deeper into the earth than geographers and study its rocks, internal processes (such as plate tectonics and volcanoes) and periods of research into earth's history several million and even billions of years ago. An undergraduate degree in geography (university or university) is an important start for geography. A bachelor's degree in geography allows a geography student to start working in several fields. While many students start their careers after undergraduate education, others continue. A master's degree in geography is very useful for students who want to teach at high school or community college level, be a cartographer or GIS expert, work in business or government. A Doctorate in Geography is necessary if you want a full-blown professor at the university. While many geography doctors continue to form consulting firms, administrators in government agencies or high-level research positions in companies or think tanks. The best resource to learn about colleges and universities offering geography degrees is the annual release of the Association of American Geographers, a guide to U.S. and Canadian geography programs. Unfortunately, the job title of geographer is often not found in companies or government agencies (with the exception of the U.S. Census Bureau). However, more and more companies recognize the skill that a geographically educated individual brings to the table. You will find many geography researchers working as designers, cartography (mapmakers), GIS experts, analytics, scientists, researchers and many other tasks. You will also find many geographers who work as instructors, professors and researchers in schools, colleges and universities. Being able to look at the world geographically is a basic skill for everyone. Understanding the connection between the environment and people, geography combines different sciences with geology, biology and climate science with economics, history and location-based politics. Geographers understand conflicts around the world because there are so many factors involved. The Greek researcher Eratosthenes, who measured the circumference of the earth and was the first to use the word geography, is commonly referred to as the father of geography. Alexander von Humboldt is commonly referred to as the father of modern geography and Davis is commonly referred to as the father of American geography. Organizing geography courses, reading geography books and, of course, exploring this site are great ways to learn. You can increase your geographic literacy in places around the world by getting a good atlas like Goode's World Atlas and use it to search for unknown places whenever you encounter them while reading or watching the news. Sooner or later, you'll have a good idea of where the places are. Reading travel calls and historical books can also help improve your geographic literacy and understanding of the world - they're some of my favorites to read. Geography looks good! More and more schools across the United States are offering or demanding geography teaching at all levels, especially in high school. The introduction of the Advanced Placement Human Geography course in high schools in the 2000-2001 school year increased the number of university-ready geography majors, increasing the number of geography students in undergraduate programs. New geography teachers and professors are needed in all aspects of the education system as more and more students begin to learn geography. GIS has become popular in many disciplines and not just in geography. The career opportunities of a geographer with technical skills, particularly in the field of spatial information technology, are excellent and should continue to grow. Grow.
